2178

DATE MAILED: 07/07/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/977,143

Applicant(s)

HANEVOLD, ROBERT M.

Examiner

Kyle R. Stork

Art Unit

2178

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 02 June 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. This non-final office action is in response to the request for continued examination filed 2 June 2006.
2. Claims 1-18 are pending. Claims 1, 5, 10, 15, and 18 are independent claims. Claims 19-23 have been cancelled by the amendment. The rejection of claim 18 under 35 USC 102 under Moneymaker et al. (US 2002/0049708, provisional filed 2 May 2000) and the rejection of claims 1-17 under 35 USC 103 under Brown et al. (US 6278448, filed 17, February 1998) and Barlow et al. (US 6275935, filed 17 April 1998) have been withdrawn as necessitated by the amendment.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown et al. (US 6278448, filed 17 February 1998, hereafter Brown) and further in view of Barlow et al. (US 6275935, filed 17 April 1998, hereafter Barlow) and further in view of Humes (US 6539430, filed 30 November 1999).

In regard to independent claim 1, Brown discloses rendering source code that defines said data input screen in said client device (Brown Col 2 Lines 4-51 i.e. client applications the communicate with server computers to receive components which allow

users to enter information); defining an executable script within said source code; and executing said executable script in response to user input (Brown Col 14 Lines 44-48 and Col 16 Lines 47-49).

Brown fails to specifically disclose rendering the data input screen inaccessible to prevent user input. However, Barlow discloses rendering the data input screen inaccessible to prevent user input (column 1, line 66- column 2, line 10). It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Brown's method with Barlow's method, since it would have allowed a user to restrict access to data (Barlow: column 2, lines 8-10).

Brown further fails to disclose associating the executable script with a predetermined z-index number for a web page and rendering inaccessible those data entry elements associated with the web page that have a z-index number lower than the predetermined z-index number. Humes discloses associating the executable script with a predetermined z-index number for a web page and rendering inaccessible those data entry elements associated with the web page that have a z-index number lower than the predetermined z-index number (Figure 5). It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Humes with Brown, since it would have allowed a user to filter objectionable data (Humes: column 2, lines 36-49).

In regard to dependent claim 2, Brown, Barlow, and Humes disclose the limitations similar to those in claim 1, and the same rejection is incorporated herein.

Brown further discloses wherein said source code comprises a tag-based language.  
(Brown Col 15 Lines 20-35)

In regard to dependent claim 3, Brown , Barlow, and Humes disclose the limitations similar to those in claim 2, and the same rejection is incorporated herein. Brown further discloses wherein said source code defines a membrane layer at a higher z-index level than other Web page elements, and said step of executing said executable script further comprises changing a visibility attribute of said membrane layer (Brown Col 11 Lines 43-67 and Col 12 Lines 1-43 and Col 7 Lines 49-65 i.e. a z-index that is defined and also layers).

In regard to dependent claim 4, Brown , Barlow, and Humes disclose the limitations similar to those in claim 1, and the same rejection is incorporated herein. Brown further discloses wherein said data input screen is received from a remote server and said step of executing said executable script is performed solely on said client device without any further processing by said remote server. (Brown Col 2 Lines 4-51 i.e. client applications the communicate with server computers to receive components which allow users to enter information)

In regard to dependent claim 5, Brown discloses a central processing unit; a memory; a user input device; a display; and a browser adapted to render said input screen on said display. (Brown Col 4 Lines 55-67 and Col 5 Lines 1-24 i.e. describes a computer system used to carry out the process)

Brown fails to specifically disclose rendering the data input screen inaccessible to prevent user input. However, Barlow discloses rendering the data input screen inaccessible to prevent user input (column 1, line 66- column 2, line 10).

It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Brown's method with Barlow's method, since it would have allowed a user to restrict access to data (Barlow: column 2, lines 8-10)

In regard to dependent claim 6, Brown and Barlow disclose the limitations similar to those in claim 5, and the same rejection is incorporated herein. Brown further discloses wherein said executable code is executed in response to user input. (Brown Col 14 Lines 44-48 and Col 16 Lines 47-49)

In regard to dependent claims 7 and 16, claims 7 and 16 reflect the same subject matter claimed in claim 2 and is rejected along the same rationale.

In regard to dependent claim 8, Brown, Barlow, and Humes disclose the limitations similar to those in claim 5, and the same rejection is incorporated herein. Brown further discloses wherein said source code defines a membrane, and wherein a visibility attribute of said membrane is changed by said executable script (Brown Col 7 Lines 49-65 i.e. layers known as wallpaper that can be visible and manipulated and resized).

In regard to dependent claim 9, Brown, Barlow, and Humes disclose the limitations similar to those in claim 8, and the same rejection is incorporated herein. Brown further discloses wherein said membrane is defined as a layer in a cascading

style sheet web page. (Brown Col 11 Lines 47-67 and Col 12 Lines 1-43 i.e. shows code that includes cascading style sheets).

In regard to independent claim 10, Brown discloses a form definition component defining a data input screen and a data submission field (Brown Col 5 Lines 25-35 i.e. user enters commands and information); a style definition component defining a layer having a width and height at least as large as said data submission field; a function definition component responsive to said data submission field (Brown Col 11 Lines 47-67 and Col 12 Lines 1-43 i.e. shows code that includes cascading style sheets, which define widths and columns to submit forms submitted).

Brown fails to specifically disclose rendering the data input screen inaccessible to prevent user input. However, Barlow discloses rendering the data input screen inaccessible to prevent user input (column 1, line 66- column 2, line 10). It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Brown's method with Barlow's method, since it would have allowed a user to restrict access to data (Barlow: column 2, lines 8-10).

Brown further fails to disclose associating the executable script with a predetermined z-index number for a web page and rendering inaccessible those data entry elements associated with the web page that have a z-index number lower than the predetermined z-index number. Humes discloses associating the executable script with a predetermined z-index number for a web page and rendering inaccessible those data entry elements associated with the web page that have a z-index number lower than the predetermined z-index number (Figure 5). It would have been obvious to one of

ordinary skill in the art at the time of the applicant's invention to have combined Humes with Brown, since it would have allowed a user to filter objectionable data (Humes: column 2, lines 36-49).

In regard to dependent claim 11, Brown, Barlow, and Humes disclose the limitations similar to those in claim 10, and the same rejection is incorporated herein. Brown further discloses wherein said layer is initially defined as hidden, and is made visible upon execution of said function definition. (Brown Col 7 Lines 49-65 i.e. desktop components are hidden beneath sub layers and not visible)

In regard to dependent claim 12, Brown, Barlow, and Humes disclose the limitations similar to those in claim 11, and the same rejection is incorporated herein. Brown further discloses wherein said layer comprises one of plural layers in a cascading style sheet web page (Brown Col 7 Lines 49-65) (Brown Col 11 Lines 47-67 and Col 12 Lines 1-43 i.e. layers known as wallpaper that can be visible and manipulated and resized).

In regard to dependent claim 13, Brown, Barlow, and Humes disclose the limitations similar to those in claim 10, and the same rejection is incorporated herein. Brown further discloses wherein said function definition component is executed in response to user operation of said data submission field. (Brown Col 14 Lines 44-48 and Col 16 Lines 47-49)

In regard to dependent claim 14, Brown, Barlow, and Humes disclose the limitations similar to those in claim 10, and the same rejection is incorporated herein. Brown further discloses wherein said function definition component is executed solely

within a client device to prevent subsequent data entry via said data input screen.

(Brown Col 7 Lines 49-65 i.e. desktop components are hidden beneath sub layers and not visible for the user to manipulate)

In regard to independent claim 15, Claim 15 reflects similar subject matter claimed in claim 1 and is rejected along the same rationale.

In regard to dependent claim 17, Claim 17 reflects the same subject matter claimed in claim 3 and is rejected along the same rationale.

5. Claim 18 is rejected under 35 U.S.C. 103(a) as being anticipated by Moneymaker et al. (US 2002/0049708, provisional filed 2 May 2000, hereafter Moneymaker) and further in view of Humes.

As per independent claim 18, Moneymaker discloses a method for preventing data entry to a web page comprising the steps of:

- Associating an executable script with the web page (paragraph 0034: Here, the executable script is associated with a webpage)
- Permitting a first data input to the web page (paragraphs 0034-0039: Here, a user selects to add a pizza to his/her order. This causes a checkbox to appear to adding potential toppings to a pizza)
- Executing, in response to the first data input, the executable script (paragraphs 0034-0039)

- Preventing data entry to at least a portion of the web page after execution of the script (paragraphs 0034-0039: Here, in response to adding toppings to a pizza, the pizza with toppings is added to the order)

Moneymaker fails to disclose associating the executable script with a predetermined z-index number for a web page and rendering inaccessible those data entry elements associated with the web page that have a z-index number lower than the predetermined z-index number. Humes discloses associating the executable script with a predetermined z-index number for a web page and rendering inaccessible those data entry elements associated with the web page that have a z-index number lower than the predetermined z-index number (Figure 5). It would have been obvious to one of ordinary skill in the art at the time of the applicant's invention to have combined Humes with Moneymaker, since it would have allowed a user to filter objectionable data (Humes: column 2, lines 36-49).

### ***Response to Arguments***

6. Applicant's arguments with respect to claims 1-18 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kyle R. Stork whose telephone number is (571) 272-4130. The examiner can normally be reached on Monday-Friday (8:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Hong can be reached on (571) 272-4124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
